Approximation of LSEG's stored history: Risk and Price Momentum are re-ranked weekly against the S&P 500 sector cohort using prices up to each date; Earnings is rebuilt as-of each date from reported surprises and broker up/downgrades (revisions have no history); Fundamental, Valuation and Insider are held at their latest value. The Current column is the 4-week average, so it can differ from the headline score. Sector and index averages cover the four rankable components only.
